- DWR will continue decreasing flow to the Feather River beginning on 05/01/17 at 0900 hours. Flow in the Feather River Low Flow Channel (the channel through Oroville) will gradually decrease from 28,000 cfs to 3,500 cfs.

# WEATHER OF CONCERN

## Weather of Concern

- As temperatures rise, so will the rivers. Warmer weather is on its way as we head into the month of May which means an increase in snow melt creating hazardous river conditions. If you will be hiking in the mountains be prepared for snow-covered and slick trails which can cause injuries. Especially be aware of the rivers as they will be rapid, strong, and frigid. The increased snow melt will also cause many waterways to over top their banks and cause dangerous flooding situations which should be avoided. As always, be safe and aware of these spring hazards

## **WEATHER SYNOPSIS BY REGION**

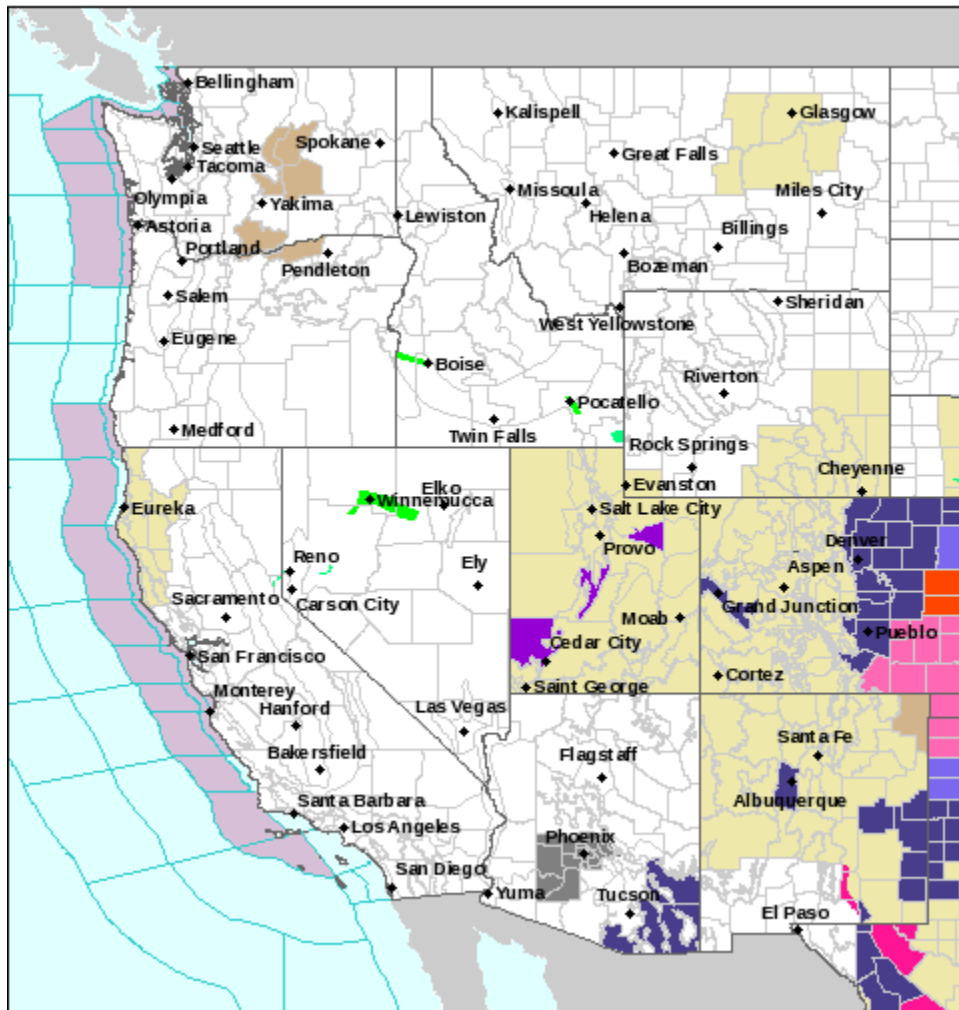

### **NORTHERN CALIFORNIA**

High pressure over the west coast will bring another fair day today. Airmass warming will bring up temperatures several degrees with daytime highs today climbing to several degrees above normal. Surface high pressure now over the Pacific Northwest is forecast to shift into the northern Great Basin while upper ridge axis shifts over the state. This will bring a continued decrease in winds today with just light northerly breezes expected by this afternoon. A shortwave trough riding over the upper ridge on Sunday will have little impact except to keep temperatures leveled off for the second half of the weekend.

### **SOUTHERN CALIFORNIA**

Gusty offshore winds with support for continued warming west of the mountains can be expected through Saturday. A transition to onshore flow will bring cooler conditions to the coast and some valleys with warming across interior areas as high pressure builds overhead through at least early next week.
